Re: Recycling Charges

We have received inquiries regarding the recycling charges associated with the City's new recycling program. For your information, the following explains the City recycling charges pursuant to City Code as those pertain to multi-family properties:

1. For all single-family dwellings, **and** for each family dwelling unit in multi-family dwellings not charged commercial container rates, residential recycling service charges will be included in the standard monthly solid waste service charge. Effective October 15, 2014, the monthly solid waste service charge will increase by \$2.81 per customer.

2. For all other multi-family dwellings, paying commercial container rates, the residential recycling service charge shall be \$2.81 per month for each multi-family dwelling unit. Such charges shall be billed by and paid to the City Finance Department on a monthly basis. Should the charges for residential recycling service become delinquent, the Finance Department shall pursue payment in the manner in which it collects other delinquent City utility bills.

In essence, if a dwelling unit is not charged commercial container rates that utility customer will be charged \$2.81 per month for recycling services. On the other hand, a complex paying for commercial container rates will see its charges from the City increased by \$2.81 per dwelling unit per month.
